What is this course about?

This course will give the candidates a basic understanding of the relevant legislation with a focus on the requirement to safely use fall protection equipment on warehouse racking systems. Customers must be aware that in addition to the safe movement around the racking system they must consider emergency situations and the need to have suitable rescue equipment and relevant training. Each device used for a given rescue situation is different and has certain advantages and disadvantages which are discussed throughout the training

What equipment is appropriate?

The fall protection equipment required for working safely on the warehouse racking system will depend on the type of working environment. This also applies to the type of rescue equipment that would be subsequently used. You are strongly advised to call and discuss your requirements with our administrator to ensure you are booking a course that will meet your requirements (in many cases we offer a free consultation service). Some courses require an area and or structure to be supplied by the customer to carry out the practical training element.

The following issues need to be considered:

- An outline of relevant legislation and safe working practices.
- Hierarchy of control methods for working at height.
- Risk assessment prior to commencing rescue
- How the equipment is designed to be used
- The need for suitable and reliable anchorages
- Pre-use Inspection of the equipment by users.
- Reasons for inspecting and checking fall protection equipment

- Emergency planning issues
- Post fall suspension
- Personnel involved in the rescue
- Managing the rescue environment
- The selected rescue equipment
- Limitations of the selected rescue equipment
- Other rescue equipment considerations

Requirements for Rescue Equipment Devices:

- Relevant European standards and codes, markings, CE, EN, BSEN
- User manuals and Instructions for use, training
- Manufacturers Statement of Obsolescence
- Compatibility issues with other PPE equipment

The practical element of this course involves all candidates completing:

- Inspection of the equipment pre use
- Preparation of the equipment
- Deployment and safe use of the equipment
- Deployment and safe use of appropriate rescue equipment
- Inspection and storage of equipment
