P+P TOOL RETENTION SYSTEM

INSTRUCTIONS FOR USE

The 'Unique' Tool Retention System (TRS) will, if used correctly, save you both time and money.

Please follow these simple User Instructions

- Identify where the TRS is to be best attached to your Belt or Full Body Harness.
- If you want to attach to a Waist Belt, simply feed the webbing through the slot on the back (max 50mm).
- If you want to attach wnywhere on your Full Body Harness, simply undo the screw on the slot at the back, open and fit to the webbing. The screw must now be screwed back in, ensuring it has not been cross-threaded and it as tight as possible.
- Attach the hook to your work appliance, ensuring the hook latch is fully closed.
- Do not use a work appliance heavier than 1.5kg.
- Always remember to check your TRS before each use, ensuring both the hook and cord are free from abrasion or frays.
- Any queries, please call free on 0800-0839190
